Expanding New HD Shooting Opportunities with an Unprecedented Level of Compactness and Mobility - the HVR-A1N HDV 1080i Camcorder

In response to the ever-increasing demands for HD program production, Sony launched the new high-definition recording system adopting the HDV 1080i specification of the HDV™ format – the HVR-Z1N camcorder and HVR-M10N VTR – in 2004. Upon that introduction, these products have rapidly acquired a huge reputation from a wide range of customers due to their outstanding picture quality, stunning performance, and cost-effectiveness. Sony has now expanded the HDV line-up by introducing the HVR-A1N camcorder to meet further evolving needs for HD acquisition.

The HVR-A1N is an extremely compact and lightweight handy-type camcorder, ideal for applications where space is at a premium or extreme mobility is required. This camcorder is equipped with a newly developed 1/3-inch type, 2.97-megapixel (total) CMOS sensor and an all-new Enhanced Imaging Processor™ that optimizes the performance of the CMOS sensor, providing outstanding high-definition picture quality.

In addition to HDV 1080i recording and playback, this camcorder offers the DVCAM™/DV recording and playback capabilities that are provided on current Sony DVCAM models. A down-conversion capability of its 1080i recordings is also provided for a flexible choice of production systems in HDV, DVCAM, or DV format.

Furthermore, the HVR-A1N incorporates a variety of convenient and professional features such as XLR audio input, time code capability, various automatic shooting modes, and still picture recording.

Available at an extremely affordable price, the HVR-A1N will be another powerful option for HD field acquisition by all video professionals, bringing further broadened shooting opportunities.
HDV 1080i Specification

The HDV 1080i specification of the HDV format features 1,080 effective scanning lines (interlace scanning system) and 1,440 horizontal pixels. It adopts the MPEG-2 compression format (M@H-14 for video), which uses 8-bit digital component recording with a sampling rate of 4:2:0. MPEG-1 Audio Layer II is used as the audio compression format, allowing for two-channel recording with a sampling frequency of 48 kHz/16-bit. The HDV 1080i specification provides high picture quality that can be used for HDTV program production.

1 The HDV format also defines the HDV 720p specification, which features 720 effective scanning lines (progressive scanning system) and 1,280 horizontal pixels.

Compatible with Existing and New DV Videocassette Tape

As a member of the proven DV family of formats, the HDV format has, from the outset, been developed for compatibility with all grades of DV videocassette tape. This allows operators to use high-grade DV videocassette tapes for applications where high robustness is critical, or consumer-grade videocassette tapes for more economical operations. For heavy-duty applications, a new high-grade mini cassette tape has been developed; the DigitalMaster™ PHDVM-63DM. This tape is compatible with the HDV, DVCAM, and DV formats.

Long Recording Time

The HDV format adopts the same track pitch and tape speed as the DV format, thus offering the same recording time - a maximum of 63 minutes when recording on a DigitalMaster mini cassette tape.
CAMERA FEATURES

1/3-inch Type, 2.97-megapixel CMOS Sensor
The HVR-A1N incorporates one 1/3-inch type primary color CMOS (Complementary Metal Oxide Semiconductor) sensor with a total pixel number of 2.97 million and a 4:3 aspect ratio, which has been developed based on Sony's many years of experience in developing imaging devices. This CMOS sensor can produce high-quality images with high sensitivity and low noise levels, which is superior to most of traditional CMOS sensors due to advantages such as its unique pixel design, which optimizes the photo-sensor area in each pixel, and advanced noise reduction technique. Another key advantage of this CMOS sensor is its high-speed processing capability. Since data captured using a single CMOS sensor for high-definition format recording is extremely large, it would take considerable time to transfer and process by traditional methods. With the Sony CMOS sensor, such large data can be processed at an incredibly high speed thanks to its flexible multi-channel readout structure. Use of the CMOS sensor also allows even large amounts of HD-resolution data to be processed with amazingly low power requirements, thus making the camcorder's overall size extremely compact. Lastly, CMOS sensors can eliminate vertical smear, even though the pixel size is small.

Optical 10x Carl Zeiss Vario-Sonnar T* Zoom Lens
The HVR-A1N is equipped with the new Carl Zeiss Vario-Sonnar T* high-definition lens with 10x zoom function. Its fully coated glass is the same as used on Carl Zeiss prime lenses, producing sharp, high-contrast images, with virtually no chromatic aberration.

Electronic Super SteadyShot System
The Super SteadyShot™ system used in the HVR-A1N detects horizontal and vertical movements and electronically compensates for unsteady camera handling. The active image area (the number of pixels used) in the CMOS sensor is automatically adjusted for the Super SteadyShot system to achieve the best performance at each zoom position.

Full Scan Mode
The HVR-A1N camcorder offers a Full Scan mode, which allows the camcorder to capture images with the resolution of approximately two million pixels at every zoom position when the Super SteadyShot system is off. With this mode, images of higher picture quality can be obtained.

Enhanced Imaging Processor (EIP)
The EIP is Sony's newly developed image processing IC intended for high-speed processing of large amounts of data captured by the CMOS sensor. In addition, the EIP employs the unique algorithm that first separates image data into texture patterns and brightness components and then processes these two elements independently. This makes it possible to have high details in the blacks as well as in brightly illuminated areas of the picture, delivering a clear image with a wide dynamic range even under backlight conditions. Combined use of the EIP and CMOS sensor allows the camcorder to provide extremely high image quality with a high level of gradation and detailed image reproduction.

2 Available when the new Backlight Compensation function is activated.
Switchable Recording and Playback - HDV 1080i/DVCAM/DV

The HVR-A1N can switch between HDV 1080i, DVCAM, and DV recording, providing full flexibility to record in either standard or high-definition format depending on production needs.

3 The HVR-A1N supports DV SP mode only; no support for DV LP mode.

Down-conversion Playback Capabilities

The HVR-A1N can convert material from 1080i down to 480i, and output these video signals through its i.LINK™ interface. In addition, these signals can also be output via either analog component, composite, or S-Video connectors. This allows editing of recorded material with a nonlinear editing system using current DV editing software as well as recording SD signals to an external VTR, while simultaneously recording HDV signals with the HVR-A1N. The HVR-A1N can also down-convert to 480P and output these signals through its analog component video connectors. When down-converting these signals, the aspect ratio displayed can be converted from 16:9 to 4:3. Display modes can be selected from Squeeze, Letterbox, or Edge crop.

4 i.LINK is a trademark of Sony used only to designate that a product contains an IEEE 1394 connector. Not all products with an i.LINK connector will necessarily communicate with each other. For information on compatibility, operating conditions, and proper connection, please refer to the documentation supplied with any device with an i.LINK connector. For information on devices that include an i.LINK connection, please contact your nearest Sony office.

HD Codec Engine

The HVR-A1N employs the highly advanced HD Codec Engine™ feature, which efficiently compresses base band HD signal data at approx. 25 M b/s with MPEG-2 compression, while maintaining optimal HD quality. Designed for reduced energy consumption, this powerful digital signal processor fits perfectly inside the compact and streamlined body of the HVR-A1N.

Still Picture Recording to Memory Stick Duo Media

The HVR-A1N incorporates a high-resolution digital camera function. Thanks to the 2.97-megapixel CMOS sensor, still pictures with 1,920 x 1,440 pixels can be recorded to Memory Stick Duo™ media. Still pictures can be captured by pressing the dedicated ‘Photo’ button, and this can be done even when recording video to tape, without any interruptions. In addition, any desired video frame recorded on tape can be captured as a still image with 1,440 x 810 pixels and recorded onto Memory Stick Duo media after video shooting.

5 When captured from a tape recorded in the HDV format.

16:9 Widescreen Acquisition in DVCAM and DV Formats

The HVR-A1N is capable of native 16:9 widescreen image capturing, with a high resolution of 720 x 480 pixels in DVCAM and DV formats, and providing true 16:9 images in Standard Definition.

i.LINK Interface

The HVR-A1N is equipped with a 4-pin i.LINK interface. This allows for on-cable digital transfer of audio, video, and command signals to a connected, compatible VTR or nonlinear editing system in the HDV, DVCAM, and DV formats.

6 Insert and assemble editing using HDV material is not recommended with the HVR-A1N.

2-channel XLR Audio Input

The HVR-A1N provides two XLR audio input connectors for connecting professional microphones or for feeding an external-line audio source. Phantom power of approx. 48 V can be supplied for the external condenser microphone. INPUT 1 audio can be recorded on CH1 only, or on both CH1 and CH2 audio tracks, with easy selection via a switch. The HVR-A1N also comes equipped with two types of microphones; an external directional microphone and a built-in stereo microphone.

2-channel Independent Audio Record Level Control with Audio Level Meter

Each input level for CH1 and CH2 can be independently adjusted and viewed with an audio level meter on the LCD monitor.
OPERATIONAL & CREATIVE VERSATILITY

Compact and Lightweight Design
The HVR-A1N features an extremely compact and lightweight body, providing an unprecedented level of mobility in HD field acquisition. The camcorder itself weighs only 670 g (1 lb 7 oz) and just 1.3 kg (2 lb 14 oz) including the lens hood, XLR audio adaptor, directional microphone, NP-QM91D InfoLITHIUM™ Rechargeable Battery Pack, and PHDVM-63DM DigitalMaster Mini Cassette Tape.

16:9, Color/Black-and-white Switchable LCD Viewfinder
The 0.44-inch type color LCD viewfinder displays high-resolution color pictures of approx. 252,000 pixels in a widescreen aspect ratio of 16:9. Operators can select to display pictures in either color or black and white to match the user’s preference.

2.7-inch' Type, 16:9 Widescreen, Hybrid, Color LCD Monitor
The HVR-A1N includes a 2.7-inch type color LCD monitor with a high resolution of approx. 123,200 pixels, which allows the input source to be viewed during recording or the playback picture to be checked on location in a widescreen aspect ratio of 16:9. This large screen is also helpful in setting menus or audio recording levels, as well as monitoring the camera and audio status. The hybrid LCD monitor used in the camcorder combines the characteristics of both transmissive and reflective LCD panels, providing clear viewing even in bright daylight conditions as well as in dark conditions. This LCD monitor also provides touch-panel control for easy operations.

Variety of Zoom Operation
The HVR-A1N provides four types of zoom control functions to offer diverse shooting styles:

- "Zoom lever" located on the camera body
- "Zoom/focus ring" located on the lens body – allows fine adjustments in zoom position
- "Zoom buttons" located on the LCD monitor – convenient for low-angle shooting
- Supplied wireless Remote Commander unit

Exposure Lever
The HVR-A1N enables exposure control both manually and automatically. The Exposure Lever provides two types of exposure control:

- Manual exposure control to manually change exposure settings using the Exposure Lever.
- AE (Auto Exposure) Shift function to adjust AE level by 15 steps using the Exposure Lever, while the AE mode is activated, for more accurate automatic exposure settings.

Tele Macro
The Tele Macro function allows operators to capture a macro image from a distance, which is especially useful for shooting small moving objects. With this function, close-up images can be shot without the camcorder casting a shadow on the subject. In addition, the image of the subject is shot in proper focus, while the background is unfocussed, allowing the subject to stand out.

New Backlight Compensation
The new Backlight Compensation function allows the HVR-A1N to produce natural and rich tones for both light and dark areas of an image under backlight conditions. Conventional systems of backlight compensation tend to make the details in light areas sacrificed, but the new Backlight Compensation function of the HVR-A1N can deliver superior images with a very wide dynamic range by increasing only the brightness of dark areas while properly retaining the brightness of light areas.
Marker

Four types of markers can be displayed on the LCD monitor and viewfinder, and can be displayed simultaneously:

- CENTER
- 4:3
- SAFETY ZONE
- GUIDE FRAME

Assign Button

A function frequently used in the field can be assigned to the Assign Button (push button), located on the right side of the camera body, allowing operators to make rapid changes under field conditions. The assignable functions include Status Check, Super SteadyShot, One Push Auto White Balance, Histogram Indicator, and Color Bars (two types).

Time Code Preset

The time code can be preset using any number in H/M/S/F (hours/minutes/seconds/frames) to record desired tape-position information. The time-code mode can be selected between “REC RUN” and “FREE RUN”. In addition to the time code, user bits can also be set.

Histogram Indicator

The Histogram Indicator for brightness can be displayed on the LCD monitor and viewfinder, allowing operators to easily evaluate the brightness of currently captured images for proper exposure.

Shot Transition

The Shot Transition™ function allows for smooth automatic scene transitions. The operator can program start and end settings for zoom, focus, and white balance into the A/B buttons and, by pressing the start button, a smooth transition will take place according to the set time, because the camera automatically calculates the intermediate values during the scene transition. The start of this function can be synchronized with the camera’s REC start function. The transition progress can be checked using an indicator displayed on the LCD monitor. In addition, a start timer function is also available for the Shot Transition function, helping to prevent operators from missing a shot. This function is very useful when complex camera settings are required during the scene transition – for example, when shooting subjects moving from the background to the foreground of a scene.

Cinema-like Image Shooting

Two powerful features to produce cinematic and film-like pictures are provided on the HVR-A1N. The Cinematone Gamma™ feature allows operators to quickly set up and load a gamma curve with similar contrast characteristic to a film gamma curve. The Cineframe™ feature allows picture movement to be reproduced like a film of 24 and 30 frames/s.

Long Operating Time

With the optional NP-QM91D InfoLITHIUM Rechargeable Battery Pack attached, the HVR-A1N can continuously record in HDV mode for up to 300 minutes, or up to 340 minutes in DVCAM/DV mode.

* Continuous recording time, indoors at 25°C
** With LCD backlight on
Simultaneous Operation of LCD Monitor and Viewfinder

- **Expanded Focus** - magnifies the center of the screen on the LCD monitor and viewfinder to about twice the size, helping manual focusing.

- **Peaking** - enhances the outline of the image where the camera focuses most, and displays the enhanced outline with color in the LCD monitor and viewfinder, helping manual focusing.

- **Zebra** - displays a striped pattern in the LCD monitor and viewfinder across highlight areas, helping manual exposure settings (100% or 70 to 100% (adjustable by 5% steps)).

- **Quick REC** - shortens the time until the recording starts from stop mode.

- **Status Check** - displays camera setting menus for audio, output signal, assign button and exposure lever functions and hours meter on the LCD monitor with the touch of a button for easy check.

Personal Menu - allows operators to customize the setting menu to display frequently used menu items.

- **Battery Info** - displays the attached battery's current charge level and its current remaining recording time on the LCD monitor with the touch of a button, when the power is turned off.

- **Super Night Shot™** - allows operators to capture images in black and white using a built-in infrared light, even in no light conditions.

- **Skin Tone Detail** - reduces detailed signal for skin color, smoothening the reproduction of human skin.

- **Black Stretch** - allows more contrast to be seen in dark parts of the picture without affecting mid-tones while maintaining the absolute black level.

- **Color Bar** - Two types

- **White Balance** - Auto, One Push Auto, Indoor (3200 K), and Outdoor (5800 K)

### Optional Accessories

- **NP-QM71D/QM91D**
  InfoLITHIUM Rechargeable Battery Pack

- **2NP-QM91D/B**
  InfoLITHIUM Rechargeable Battery Pack (NP-QM91D x 2)

- **VCL-HG1737C**
  2.0x Tele Conversion Lens

- **VCL-HG0737C**
  0.7x Wide Conversion Lens

- **UWP-C1**
  UHF Synthesized Wireless Microphone Package

- **VMC-30VC**
  3m Component Video Cable

- **VMC-30FS**
  3m Multi AV Cable (with S Video)

- **PHDVM-63DM**
  DigitalMaster Mini Cassette Tape

*When the NP-QM91D battery pack is attached to the HVR-A1N, the battery pack protrudes past the viewfinder.*

### VTR section

| Recording format | HDV/DV SP |
| Play out/Down conversion format | HDV/DV SP |
| Tape speed | DVCAM |
| Playback/Recording time | DVCAM |
| Fast forward/Rewind time | Approx. 2 min 40 s with PHDV VM-63DM cassette |

### Input/Output connectors

| Audio/Video input/output | A/V OUT jack, 10-pin connector |
| Component video output | COMPONENT OUT jack |
| XLR audio input | XLR 3-pin female x 2, 327 mV, -60 dBu: 3 k, +40 dBu: 10.8 k, power supply: approx. 48 V |
| MIC | Minijack x 1, 0.388 mV, low impedance with DC 2.5 to 3.0 V, output impedance 6.8 k (φ3.5 mm), stereo type |
| LANC | Stere minijack (φ3.5 mm), x 1 |
| USB | Mini-B x 1 |

### Built-in input/output devices

| LCD viewfinder | 0.44-inch type, approx. 252,000 (1120 x 225) pixels, hybrid type, 16:9 aspect ratio |
| LCD monitor | 2.7-inch type, approx. 123,200 pixels, hybrid type, 16:9 aspect ratio |
| Microphone | Stereo type, noise reduction on/off |
| Speaker | φ16 mm |

### General

| Mass | Approx. 670 g (1 lb 7 oz) (camcorder only) |
| Power requirements | DC 7.2 V (battery pack), DC 8.4 V (AC adaptor) |
| Power consumption | HDV Approx. 5.6 W (recording mode with LCD viewfinder on) |
| DVCAM/DV | Approx. 5.1 W (recording mode with LCD viewfinder on) |
| Operating temperature | 0 to 40 °C (32 to 104 °F) |
| Storage temperature | -20 to +60 °C (-4 to 140 °F) |
| Supplied accessories | AC-115 AC adaptor, power code, NP-FM50 InfoLITHIUM rechargeable battery pack, lens hood with lens cover, RMT-831 wireless Remote Commander unit, A/V connecting cable with S video, component video cable, USB cable, Memory Stick Duo (16 MB), Memory Stick Duo adaptor, ECM-NV1 monaural electret condenser microphone, XLR audio adaptor, shoulder strap, operating instructions |

* These values are calculated to be equivalent to the 35 mm film.
